Working Together to Build the Future of Finance

Telcoin is revolutionizing global finance by uniting blockchain technology, digital banking, and telecommunications.

- Telcoin Digital Asset Bank: the world's first true crypto bank, regulated in the US
- Digital Cash: multicurrency stablecoins
- Telcoin Wallet: DeFi at your fingertips

A non-profit organization representing the interests of GSMA Mobile Networks and other stakeholders in maintaining and developing the Telcoin Platform.

- Telcoin Network: the blockchain standard for the telecom industry, exclusively validated by GSMA MNOs

The Problem: Financial Infrastructure Needs an Upgrade

Legacy systems aren't suitable for our globalized, borderless, Internet-driven economy. Fintech firms are forced to build on top of shaky foundations.

✗ Fragmented system of private bank ledgers

Siloed sets of domestic ledgers run at varying speeds and are forced to "hub and spoke" via legacy technology through numerous intermediaries.

✗ Complex and expensive to maintain

Legacy systems were created as standalone entities, often in archaic COBOL, with little ability to interact seamlessly.

✗ "Circuit switched" banking is costly for consumers

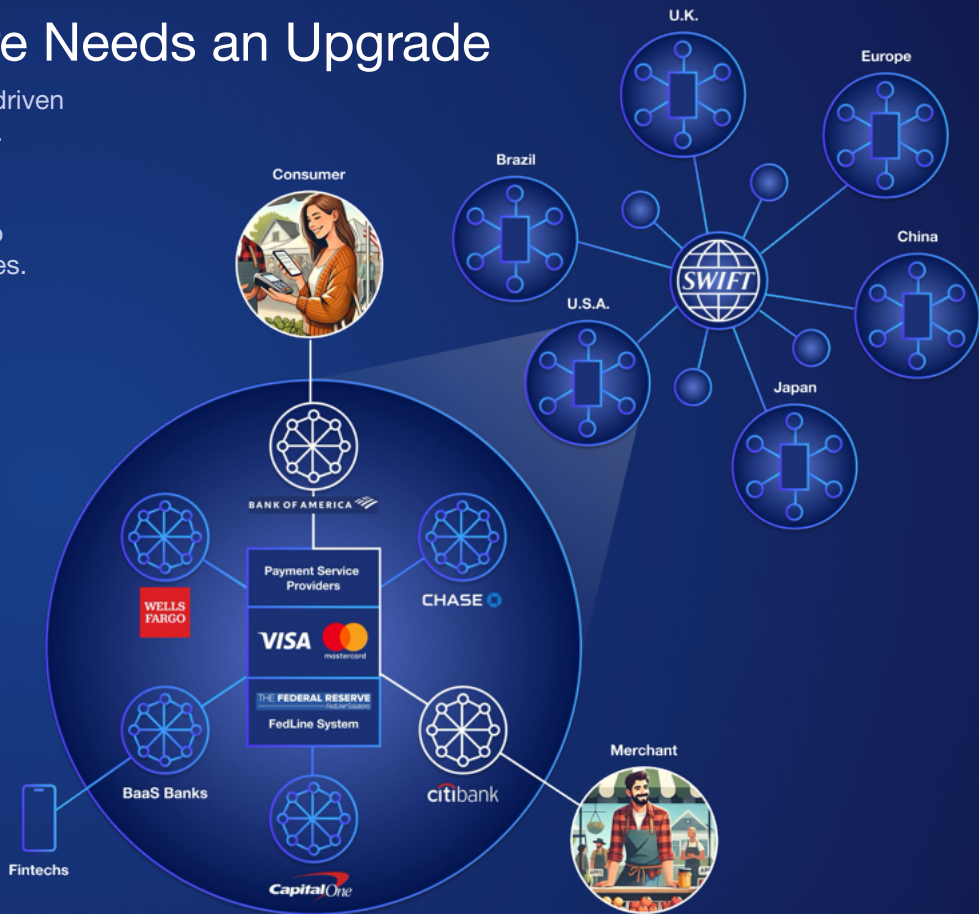

Core banking systems impose heavy costs on each bank, costs that are passed on to consumers in terms of fees and friction.

THE WALL STREET JOURNAL.

The Bank Behind the Fintech Revolution
Stumbles After Customer Funds Go Missing.

Fintechs to date have been built upon Banking as a Service (BaaS) banks with legacy infrastructure not fit for purpose. Last year's collapse creates a market vacuum and opportunity to introduce a better solution.

December 25th, 2024

The Solution: The Internet of Money

Global regulated digital asset banks issuing multi-currency Digital Cash stablecoins as doorways into a single global blockchain ledger.

✓ Transforming Financial Infrastructure

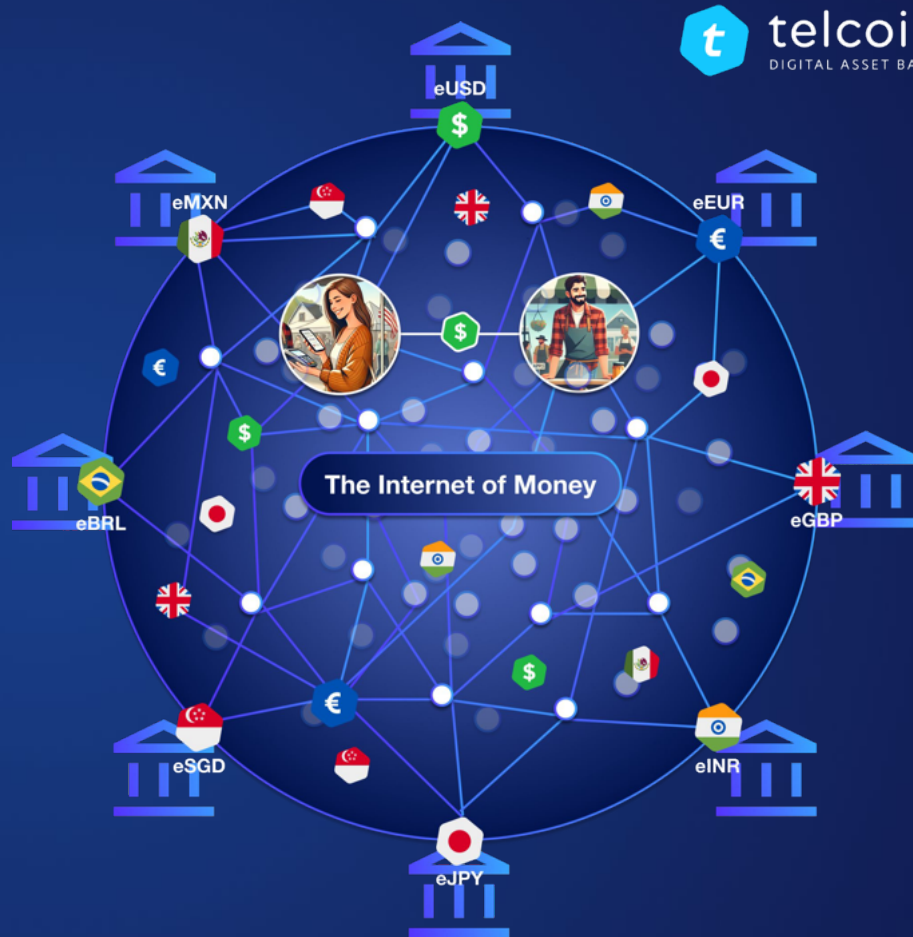

Global peer-to-peer transactions; digital ownership independent of third parties; openly accessible, more efficient, fully transparent.

✓ Redefining Money and Payments

Digital Cash enables the digital equivalent of handing a merchant a 20 dollar bill. Free-floating, borderless money and direct payments.

✓ Rearchitecting Financial Services

Code replaces intermediaries with decentralized digital markets infrastructure, reducing costs and operational risks. Financial services become as useful and accessible as the Internet.

UNITED STATES SENATE COMMITTEE ON
BANKING, HOUSING, AND URBAN AFFAIRS

“Internet 3.0 is what we’re talking about today, and that’s the Internet of value.”

U.S. Representative Glenn Thompson

Press conference on February 4th, 2025, hosted by the Senate Banking Committee and the new Crypto Czar David Sachs.

Telcoin Digital Asset Bank and Digital Cash

- Telcoin Digital Asset Bank [received its charter](#) from the Nebraska Department of Banking and Finance on November 12th, 2025.
- Telcoin Digital Asset Bank will become the first operational crypto bank, providing the first US bank account numbers directly tied to self-custodied stablecoins (Digital Cash).
- It will also provide the first native connection between FedLine and crypto ecosystems, creating the backbone of the Internet of Money.

Telcoin's bank-issued Digital Cash stablecoins provide the regulated doorway to the Internet of Money.

Telcoin has been at the forefront of digital asset banking and stablecoin legislation in the United States

At the federal level, Telcoin has also been working hand-in-hand with the US Congress and regulators for five years to develop federal stablecoin and crypto banking legislation: the GENIUS Act (passed in July 2025) and CLARITY Act.

Telcoin CEO Paul Neuner and Nebraska Governor Jim Pillen at the Telcoin Digital Asset Bank charter signing.

The [Nebraska Financial Innovation Act](#), signed into law in 2021, explicitly authorizes charter holders to issue stablecoins, take crypto deposits, connect to the Federal Reserve payment system, provide digital asset loans, and connect consumers to decentralized finance (DeFi).

Paul meeting with Senator Bill Hagerty, the Senate Banking Committee member who [introduced](#) the latest federal stablecoin legislation on Feb 4th, 2025.

The [GENIUS Act of 2025](#) was crafted to recognize state chartered digital asset banks (like Telcoin's), allowing them to operate nationwide.

Telcoin's Unique Positioning

- Retail banking 3.0 as a vertically integrated blockchain financial solution
- Only regulated crypto bank to offer seamless integration across asset classes and financial products
- First truly global, borderless bank

Telcoin Founder and CEO

As quoted in American Banker on Dec 6th, 2024

Telecom Industry Alignment

The evolution of the global financial system toward an “Internet of Money” and direct “Digital Cash” stablecoin payments is a massive opportunity for the mobile telecommunications industry.

Telcoin and the Telcoin Association are aligned with the telecom industry

- Telcoin: First blockchain member of the GSMA since 2018
- Telcoin Association: non-profit organization whose mission is to represent the interests of GSMA Mobile Networks in the blockchain and digital asset space.
- Active participants in GSMA and establishing standards and template for MNOs to get into blockchain and stablecoins.

Mobile Financial Services 2.0

By running blockchain as a network service, MNOs earn revenue settling direct Digital Cash payments without needing to be a bank or custody funds.

Mobile networks are best positioned to power the blockchain economy

Mobile networks are the most distributed infrastructure on the planet – already operating at the scale needed to support a global blockchain network.

MNOs are ideal blockchain node operators

- Present in every country: 2-3 MNOs per market, trusted and regulated
- Data centers already deployed close to every smartphone in the world
- KYC infrastructure touching ~7 billion people globally
- Proven ability to handle mission-critical, fraud-resistant systems

Just as telecoms switch calls, SMS, and data – you can now switch Digital Cash

- Run the settlement layer of stablecoin-based payments directly between consumers and merchants
- No need to become a custodian or bank – just operate the network

Telcoin is a GSMA Associate Member.

AMERICAN BANKER

“Telecoms around the world run the internet [...] Why shouldn’t they also process blocks and, effectively, the settlement layer of Digital Cash floating around the Internet of Money?”

Paul Neuner

Telcoin Founder and CEO
As quoted in American Banker

The Internet of Money

The Internet of Money will usher in direct Digital Cash payments without intermediaries.

Global MNOs can take over the settlement layer of banking in this new world of decentralized direct payments.

Highly Experienced Operators Backed by Industry Experts

Our leadership team brings decades of hands-on experience in the mobile telecom industry, spanning network operations, business development, and carrier partnerships across global markets.

Paul Neuner
Chief Executive Officer

Founded two tech startups in telecom and mobile cybersecurity. Installed fraud/security systems in 50+ MNOs globally.
22 years telecom/cyber experience

David Stuart
Chief Operations Officer

Former Telecom Revenue Assurance Director, managing fraud programs for MNO groups covering 50+ countries (Veon Group, T-Mobile, Lycamobile, Ooredoo Group, Cable & Wireless).
27 years telecom/finance experience

Daniel Blackband
VP, Fraud Management

Former Telecom Fraud and Security Manager for MNO groups and vendors covering 100+ MNOs globally (British Telecom, Interoute, Wavecrest, Nokia, Ooredoo Group, Roscom, Veon Group).
37 years telecom/fraud experience

Patrick Gerhart
Telcoin Digital Asset Bank President
Former Bank President
Former Director Nebraska
Independent Community Bankers
20 years banking/policy experience

Richard Kay
Chief Compliance Officer (Global)
Former Head of Compliance at
Revolut (wealth department)
Extensive experience in compliance
for FCA regulated institutions.
18 years compliance/bank experience

Jeff Quigley
EVP, Commercial
Former venture capital partner
Former tech media editor (Tech in Asia,
The Diplomat) and reporter/contributor
13 years VC/mass media experience

Mark Quandahl
Telcoin Digital Asset Bank Director
Former Director of Nebraska Department
of Banking and Finance
Former Chairman of Nebraska State
Senate Banking Committee
37 years banking/policy/law experience

Tim Mahota
General Counsel
Former SEC Enforcement Attorney
GC/CCO at Integral (FX Platform)
and Mint (Crypto Exchange)
34 years financial law experience

Stephanie DaSilva
Chief Compliance Officer (USA)
Former Director of Compliance at
Uphold (crypto exchange)
Extensive experience in both banking
and crypto regulatory compliance
12 years compliance/bank experience

Parker Spann
EVP, BD & Strategy
Founder of the Telcoin Association,
Architect of Telcoin Platform,
Executive Director of the TAO
11 years blockchain experience

Ralph Castner
Telcoin Digital Asset Bank Director
Former CFO of Cabela's, built \$4B+
revenue operation; led their IPO in
2004; launched 14th largest credit
card operation in the US
33 years finance/payments experience

The Blockchain Standard for Mobile Network Operators

Telcoin Network is an EVM-compatible, public blockchain secured globally by GSMA Operator Member MNOs using a Proof-of-Stake consensus. Telcoin Network is helping the mobile telecom industry build the Internet of Money, introducing an entirely new revenue stream from running blockchain as a network service.

Open and multi-chain
Zero finality access to liquidity across DeFi markets

Exclusively validated by GSMA MNOs
Only MNOs earn transaction (gas) fees and block rewards

Public, standard, and EVM-compatible
Adheres to the most popular blockchain standard

Blockchain as an MNO Network Service
Switch calls, data packets, and now “blocks”

How Can an MNO Participate?

Run a Validator node of Telcoin Network testnet and mainnet

- Earn TEL for processing blocks on global transactions on network
- Can be done as a turnkey pilot project
- Setup in MNO-affiliated datacenter (immediate revenue for datacenter subsidiaries group-wide)
- Funded by blockchain revenue to demonstrate viability; can be taken over by MNO at any time
- Open and multi-chain – major blockchains participating

Direct connection to MNO's existing mobile money platform

Cooperation on local stablecoin payments pilot

Turnkey Pilot Project Proposal

Telcoin Network Validator Pilot

✓ MNO datacenter hosting

Sedona (or other IT partner) to lease datacenter rack and procure/install recommended hardware.

✓ Investment and running cost

No CapEx or OpEx required. Sedona will settle datacenter fees and local IT support with blockchain revenues.

✓ Term and deliverables

Initial one year datacenter lease and pilot, renewable.
Monthly reports of activity, revenue and costs.
MNO has right to take over project at anytime.

✓ Optional Project Scope

- Direct stablecoin rails to MNO eWallet
- Demo of MNO-branded stablecoin wallet
- Sedona fraud management platform
- Demo of MNO API to monetize telecom data to secure Digital Cash stablecoin payments

What will the MNO get in return

Immediate datacenter revenue

Project will lease MNO datacenter racks group-wide, generating immediate colocation revenues.

Blockchain validation revenue

Acting as a Validator for Telcoin Network, MNO will be eligible to earn TEL for processing blocks and a share of stablecoin transitions globally (*used to fund datacenter and IT support costs of pilot project, but can be taken over by MNO anytime*).

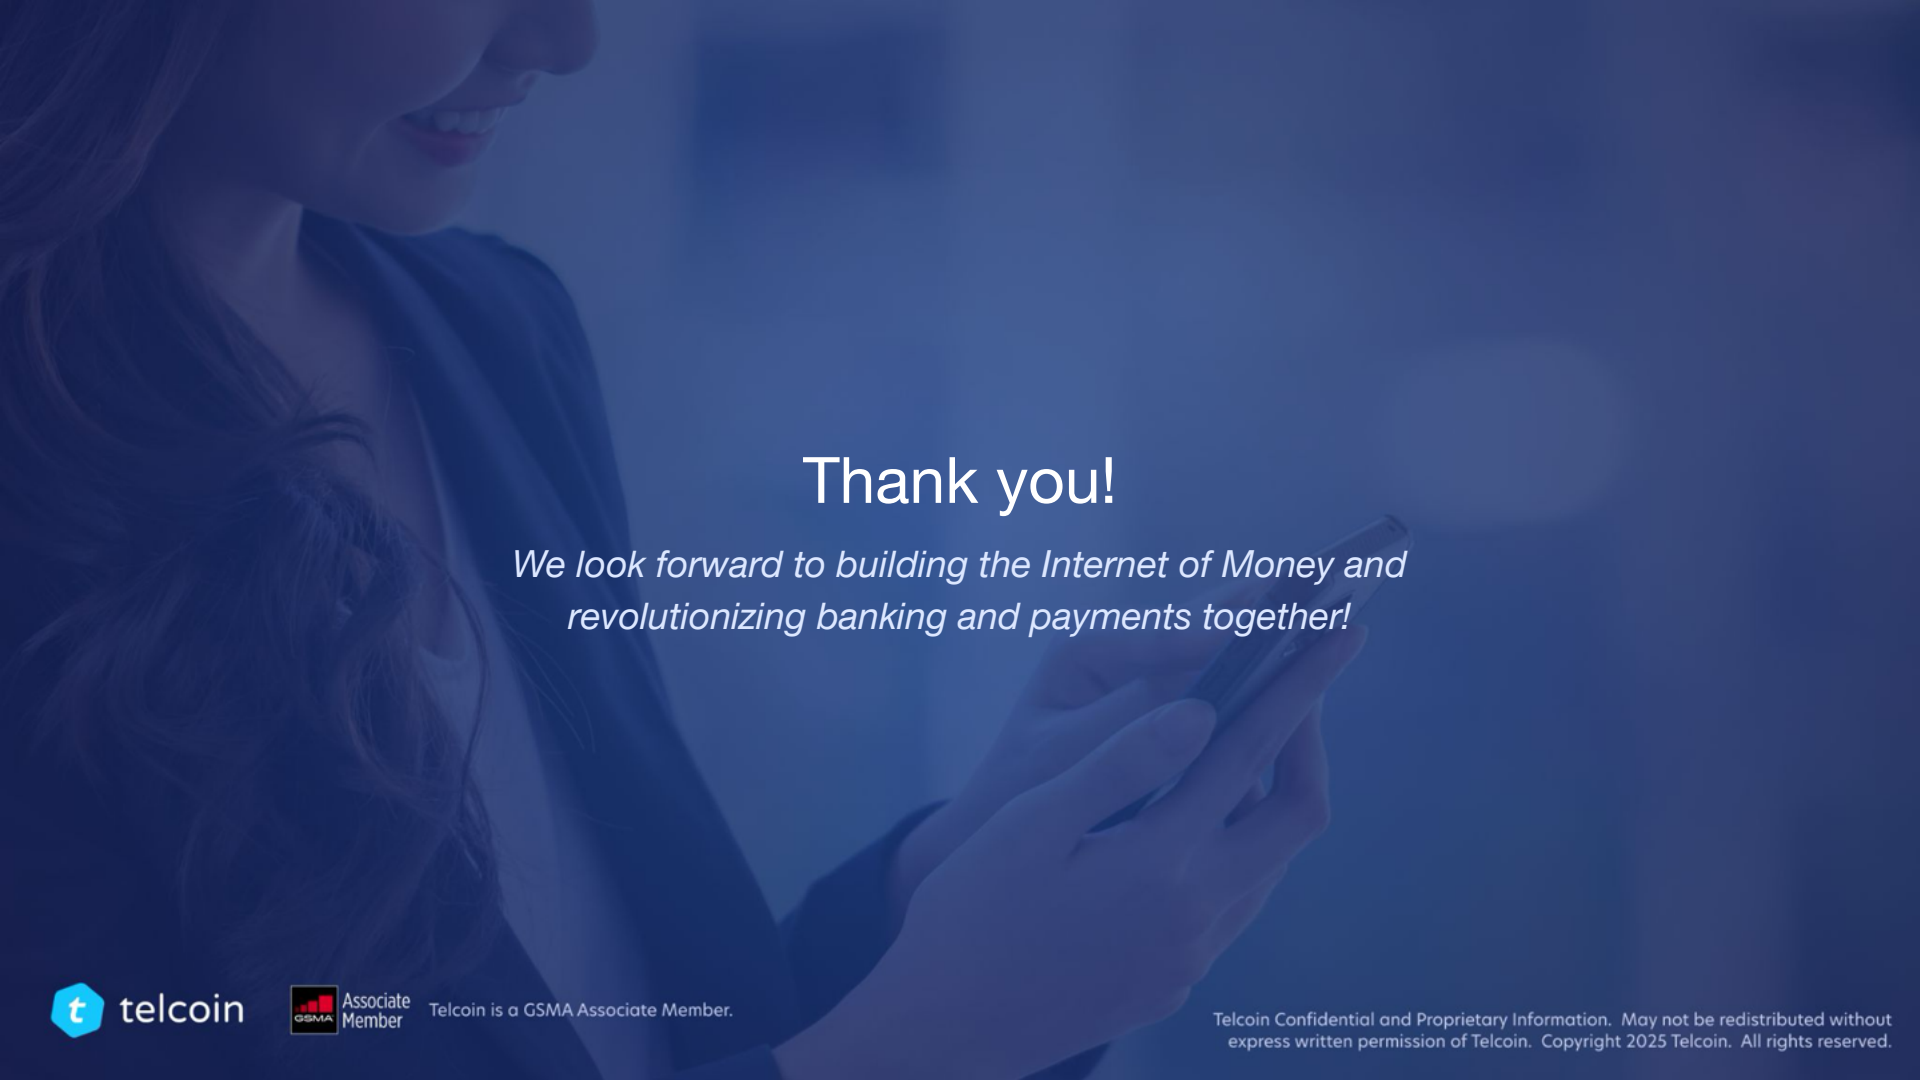

Quick entry to stablecoin market

Direct connection from MNO eWallet to global multi-currency stablecoins. Optional MNO-branded stablecoin wallet. Immediate exposure to blockchain validation and stablecoin market opportunities, with zero upfront investment or risk.

Next Steps

- 1 Introduction to Datacenter Subsidiary Team and ask for a full rack in their datacenter**
Recommendation for local MNO-trusted IT datacenter support company.
- 2 Sign Memorandum of Understanding with Telcoin**
Project plan based on clear definition of scope for the pilot project.
- 3 Sedona signs datacenter lease agreement, procures/installs equipment, and sets up Telcoin Network Validator node (and optionally multi-chain nodes) as a turnkey solution**
Optionally MNO can use its own hardware and run project themselves and work directly with Telcoin and Telcoin Association on project scope. Gas fees and block rewards go to the system integrator until MNO assumes management of the node.
- 4 Pilot “go live” and monthly reports to MNO**
MNOs reserves the right to assume management of the node at any time. Once an MNO assumes management of the node, they receive all block rewards and gas fees directly.

Thank you!

*We look forward to building the Internet of Money and
revolutionizing banking and payments together!*
